[Schedule Draft](#)

[Employee](#)

[Day Off Requests](#)

[Availability](#)

The current week schedule draft is loaded by default.

You can see the previous schedule drafts as well.

The "next" button is disabled by default. When you click the "prev" button to see the previous drafts, the "next" button becomes enabled until you reach the latest draft you made.

You can save the displayed schedule draft at your machine as a text, csv, word, excel, or pdf file and work on that later.

[Day Off Requests](#)

[Availability](#)

1
By selecting a particular day and clicking on it, it's automatically assigned as a day off for the submitted employee.

1
All day off requests are stored in the database. If you scroll the calendar to the past, you will observe the previously assigned day offs.

2
This tooltip is displayed when a user clicks on the "Availability" button. When the button is released (clicked off), the tooltip disappears.

3
Undo the last day off selection.

4
When a user leaves the "Day Off Requests" tab, all changes are saved automatically. Consequently there is no need in "Save" button.

Availability of
selectedEmployeeName
was saved.

When you click the "Start Draft" button, the new schedule draft(s) is(are) done automatically for the corresponding week(s) based on provided day offs and availability.
